Lawa't Kape — Changes after the October 28 Evaluation

POS and captive-portal system · Capstone project · Prepared October 30, 2026

Versions: 1.28.0.217 → 1.30.0.232 **Source:** both evaluation recordings (Oct 28), transcribed and reviewed point by point

Automated tests: 1,173 passing

22	13	9	6
requests from the evaluators and owner	done and live	planned, with design decided	extra safety fixes found in review

1. Done — evaluator requests now in the system

What the evaluators asked	What changed	Version
Sales report by day, week, month and year; best sellers per period Sir Manalo · R1 28:35	**Reports** → **Sales**: choose Daily, Weekly, Monthly or Yearly and any date. Shows net sales and the change from the previous period, orders and average order, cash vs e-wallet, discounts, voided orders, a chart and table by hour/day/month, best sellers, slow movers and sales per category. Print or download as CSV.	`1.30.0.231`
Stock report; daily and weekly reports Ma'am Ella · R2 31:50	**Reports** → **Stock**: for the same periods, every ingredient's start, received, used in sales, wasted, adjusted and end amount; delivery and wastage cost; most used, most wasted (with reasons) and what is running low. Print or CSV. Every stock movement is now recorded with its type.	`1.30.0.232`
Confirmation before critical actions, no one-click changes R1 00:00, 16:24 · R2 15:15	"Save this?" before saving ingredients, restocks, products, wastage, reserved network addresses and the automatic speed setting. Orders and logout already asked (1.28.0).	`1.29.0.219`
Lock sign-in after 3 wrong attempts, not 5 R2 18:35	Sign-in locks after the 3rd wrong password, with a live countdown until it unlocks.	`1.29.0.218`
Wrong Wi-Fi code: block automatically after 3 tries R2 20:18	A device that types 3 wrong codes is blocked for 5 minutes without staff action. A code that exists resets the count.	`1.29.0.220`
Wastage can't be more than one opened package R1 06:47	Each wastage entry is capped at what one package holds (e.g. one 1,000 ml box) and at the stock on hand; the form shows each package size. Partial amounts (e.g. 50 ml) are entered in ml/g.	`1.29.0.221`
Archive user accounts instead of deleting them R2 10:05	"Remove" is now "Archive". No account is ever permanently deleted; archived accounts can be restored and keep their sales history. Self-delete on the Profile page was removed.	`1.29.0.222, .226`

What the evaluators asked	What changed	Version
AI pending-actions icon looks like the chatbot R2 24:07	The icon is now a robot with a cog and says "AI actions waiting for approval".	`1.29.0.223`
Backups more often than once a night Sir Manalo · R1 45:58	A backup is made every hour while the server is on; the last 7 days are kept. (The nightly 11:30 PM backup rarely ran because the server is usually off by then.)	`1.29.0.224`
Show expected cash before the count; partial wastage amounts R1 01:41, 44:00	Already in the system before the evaluation; confirmed and noted.	`existing`

2. Done — owner's requests

Request	What changed	Version
See the AI account balance and daily limit	**AI Usage** card on Barista AI Settings: OpenRouter credit balance and today's free AI requests (e.g. "13 of 50"), with a warning when the balance is below zero.	`1.29.0.223, .227`

> **Action for the owner:** the OpenRouter balance is currently **−$0.20**, so the daily limit has dropped to 50 free AI requests. A small top-up on openrouter.ai should bring back the higher limit before the defense.

3. Extra fixes found during code review

Each batch was checked by an independent reviewer before release. These problems were found and fixed, each with an automated test:

Problem	Fix	Version
Archived accounts still received shortage, stock and network emails	Alerts and emails go only to active accounts.	`1.29.0.225`
Any device could fake its address to dodge the wrong-code and sign-in limits	Only the shop's own proxy may pass on a device's address.	`1.29.0.229`
Restoring the oldest backup deleted it first	The backup being restored is never pruned.	`1.29.0.228`
AI Usage card ignored a key saved on the page and stalled when offline	Uses the same key as the assistant; remembers a failed check for a minute.	`1.29.0.227`
The Sales page totals counted voided orders	Voided orders are left out, matching the new report.	`1.30.0.231`
Stock History could not be filtered by staff	The person filter lists everyone.	`1.30.0.232`

4. Planned next — design already decided

Request	Plan	Status
X-Read and Z-Read Sir Manalo · R1 18:20, 52:09	X-Read button on the register (current shift totals, closes nothing). Z-Read once per business day with a Z number, running grand total, first/last order number, discounts, voids and refunds; locks the day; printable. Non-VAT layout.	Next
Show the actual internet speed from the ISP R1 02:54	Speed test through the shop's line (once a day + "Test now", small to save prepaid data), live usage, how many guests fit per plan, a reserve for the register and AI, and a warning when a plan is faster than the line.	Next
Stock received date, expiry date, first-in-first-out R1 10:07 · R2 29:15	Stock kept in dated lots with optional expiry; oldest used first; "Expiring soon" list (expired / this week / this month) with a Write off button.	Planned
Receive deliveries by purchase order number R1 11:17, 34:10	Each sent purchase order gets a PO number; staff pick it and get a checklist of expected items; the supplier's receipt / DR number is recorded.	Planned
Verify the opening cash; honest cash count R1 40:23 · R2 00:00	The next shift (or the owner) confirms the previous closing count; the "Use Expected Amount" shortcut is removed so the drawer is actually counted.	Planned
Return / refund Sir Manalo · R1 27:33	Staff choose the order, items and reason; the owner approves in the same queue as voids; refunds appear in the reports and readings.	Planned
One person runs the shift: POS and kitchen in one screen R1 21:54 · owner	"Orders to make" panel on the register with Start/Done buttons, so taking and preparing orders happen on one tablet.	Planned
One Wi-Fi code for a group R1 13:09	One code that works on a set number of devices instead of one code per person.	Planned
Activity Log grouped by category, with date filter	Security and inventory entries grouped, filter by date.	Planned

5. Answered during the evaluation (no change needed)

- **Void approval:** kept as an owner-approval queue by design, since the shop has one staff member per shift and the owner may approve remotely.
- **Security of the server on the guest Wi-Fi:** guest devices are limited by firewall rules to internet access only; SSH and the admin pages of the server, firewall and DNS are blocked for them.
- **HTTPS, offline use, AI token limits, scheduled jobs, BIR receipts, Senior/PWD discounts and reprinting:** already in place and explained.
